

TOP TECH TOYS FOR CHRISTMAS

PWC G8 Gals@Technology

Tech Toys - 2018

Current Topics

- Facebook breach – 50 million users of the “View As” feature
- Google+ Breach
 - Software “glitch”
 - Access to Google+ users profile by outside developers
 - Google claims it found “no evidence that any developer was aware of this bug, or abusing the API,” adding: “We found no evidence that any profile data was misused”.
- Apple event coming Oct 30. New iPads, Mac, and maybe other things

Windows 10 Version 1809

- *Update: Microsoft has paused the rollout of the October 2018 Update and removed the installation files from its download servers while it investigates reports of data loss from customers who installed the new version. See "Microsoft pulls Windows 10 October Update (version 1809)."*

Significant improvements for
Magnifier feature

The screenshot shows the Windows 10 Settings application with the Magnifier settings page open. The left sidebar lists various settings categories, with 'Magnifier' selected. The main content area displays the 'Magnifier' settings, including a toggle for 'Use Magnifier' which is currently turned off. Below this, there are instructions on how to use the Windows logo key with Plus (+) and Esc to turn Magnifier on and off. A link 'Make everything on my computer bigger' is also visible. The 'Change zoom level' section shows a slider set to 100%. The 'Change zoom increments' section has a dropdown menu set to '100% (default)'. At the bottom, there are two checkboxes: 'Start Magnifier after sign-in' and 'Start Magnifier before sign-in for everyone', both of which are currently unchecked.

- Remember **BEFORE** you update
 - Create a Restore Point
 - Have a good backup

Windows 10

- <https://www.zdnet.com/article/windows-10-october-2018-update-how-to-get-it-how-to-avoid-it>
- Two options
 - First, you can opt into the [Semi-Annual Channel](#), instead of the Semi-Annual Channel (Targeted). Devices assigned to that channel don't begin receiving feature updates until Microsoft has declared them ready for widespread business adoption, a designation that should give you at least two months of breathing room.
 - Second, regardless of which channel a device is assigned to, you can defer the delivery of feature updates by up to 365 days from the official release date for the selected channel. (Quality and security updates can be deferred up to 30 days.)

WiFi is “rebanding”

- 802.11n technology will now be referred to as Wi-Fi 4
- 802.11ac technology will now be referred to as Wi-Fi 5
- 802.11ax technology will now be referred to as Wi-Fi 6

Tile

- Phone can locate tiles and tiles can locate phones
- Smart alerts if you leave a tile behind
